- Maintenance
- Security
- Cleaning
- Foodservice
- Remote Site Management

### **Specialized security solutions**

Comprehensive security solutions, combining our expertise in services & systems, tailor-made according to your specific requirements.

# Enhancing security with systems

## Who we are

For more than 16 years, ADEN Services has been providing security solutions to local and international organizations operating in China, Central Asia, South East Asia, Africa and the Middle East. We manage facilities for our clients from industries, hospitality, offices, R&D, mining, oil & gas.

## **Our mission**

Allow our clients to focus on their core business by creating a safe and secure work environment, combining systems and services to provide you an efficient security solution.

“ Our goal is to provide you with a safe & secure work environment, considering the specific risks in the region you operate and your budget. ”

**Joachim POYLO, Founder & CEO**  
**ADEN Services**

## ***Our credentials***

*Operating security systems for hundreds of clients*

### **Our experience makes us different**

ADEN Services experts gathered knowledge from hundreds of sites, analyzing the specific conditions and risks our clients are facing on a daily basis. We are ready to make you benefit from our knowledge.

### **Systems are cost efficient, reliable & incorruptible**

In developing regions, labor cost are meant to increase, at a pace difficult to predict. Individuals are often tempted by making easy money and corruption is widespread. Security systems when introduced in this equation enable to gain in efficiency & reliability.

## Audit

Auditing your site is the preliminary phase to the security systems project you want to implement. Our experts will come on site and conduct the audit taking into consideration the specific conditions of your facility, identify with your management the risks you are facing and what are the best technical solutions in line with your budget. Our wide expertise in different types of facilities and countries allows us to help you set the cursor at the right position on a 3 axis matrix : Risk – Cost – Efficiency.

## Procurement

Our geographic proximity and the strong commercial relationship established through the years with the best manufacturers in China guarantees you will benefit from the best prices, wherever you operate your facility. Should you want to purchase products via our procurement department or decide to appoint us to manage your security systems project, our purchasing team will bring you all the support you need before and after sales.

## Engineering

Our international engineering team located in China prepares the security systems designs based on the audit prepared by our experts. We will first submit you the simplified technical design for your internal review and provide you the full technical designs so you can analyze the solution in the details and keep it in your records.

## I nstallation

Our technical management team is able to implement projects in any location. We built our expertise working with partners all over the world and will bring with us our standards in managing local workers. ADEN Services already set working procedures so by allocating one project manager he can make the best out of the labor force available in your region.

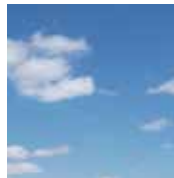

## O perations

Our main advantage compared with other Security Systems companies is that we focus on operations, using the systems to provide you better service, when other vendors will have a reductive vision of your project focusing on the systems only. We have this vision because we actually operate the systems we install, when our competitors simply install and leave the site.

## M aintenance

In addition to the standard warranty period of the systems we install, we develop different plans for maintenance according to your requirements: either combined with our on site offer (dedicated technician), remote check on a regular basis (daily to monthly, performed from our Operations Command Center) or regular on site visits. From the early stage of the project we define together the technical and operational parameters to control so you can be sure the systems are maintained in good condition.

# Bringing it all together

## Perimeter security

Each site has its own specificities, together we can define the security concept to apply in order to reach the level of protection you need.

## CCTV systems

CCTV is a great tool to know exactly what happens on site. Our consulting and technical teams can help you define the right system.

## Access control

Access control system is necessary to enforce regulations on site for vehicles and people circulating in the different areas of your site.

## Control rooms

Security systems have to be monitored from a secure location. We can help you define the right approach to maximize efficiency.

## Alarm systems

Alarm systems can help you monitor at low cost the critical locations in your facility by using different types of sensors depending on the risks identified.

## Localization

Your personnel has to be found easily when major problems arise. Different types of GPS can be linked to one platform and help you save their life.

## Remote monitoring

In specific regions where corruption may be rampant the personnel in charge of monitoring cannot be trusted at 100%. We can host the monitoring of your systems and lower this risk for you.

## Operations control

We develop our own tools and reporting lines to check on the security personnel on patrol and at fixed positions to maximize their efficiency.

## Safe rooms

If you want to protect your intellectual property or key personnel, ADEN Services can provide you with secure space you can rely on.

## Inspection equipment

Checking what is brought in & out of your site is our guards' main duty, we selected the right equipment so our personnel can perform the task efficiently.
